MEMBER GUIDE

TRAILER FOLK HQ

Everything you need to install the app, find your way around, and run a gig from your iPad, iPhone or Android phone.

band.eckerthaus.com
Updated October 2026 · app version 55

Folk grit meets country gold.

WELCOME TO HQ

HQ is the band's shared home base. Gigs, setlists, charts, quotes and money all live in one place — so there's one answer to "when's load-in?" and "what are we playing?"

HOME
What's next: your next gig or practice, what needs attention, and the calendar.

GIGS
Every lead, booking and past gig — with paperwork, photos, checklist and the day sheet.

SETS
Setlists: build them, drag songs around, let the optimizer help, then play from them.

SONGS
The song book: keys, BPM, who starts it, ratings, and your own PDF charts.

METRICS
Gigs and practices by year, plus income and money owed.

PREFS
Text size, colorblind mode, your charts, the page-turner pedal and the Monday email.

ADMIN
Clients, quote and invoice settings, the roster, Trash and the activity log.

ALONG THE TOP
The magnifier searches everything (or press `/`). Your photo opens **Training docs** (this guide) and **Sign out**.

WHO CAN DO WHAT

- **Everyone** can view and edit gigs, setlists, songs, clients and settings — and use Gig mode.
- **Managers only** (Tyler) see the **Roster & logins** section in Admin, where people are added and given a role.
- Your **star ratings**, **pen marks** and **chart choices** are yours alone.

> **SAFETY NET**
> Deleting something moves it to the Trash with an **Undo** button, and the Admin page keeps a log of who changed what. It's hard to break anything for good.

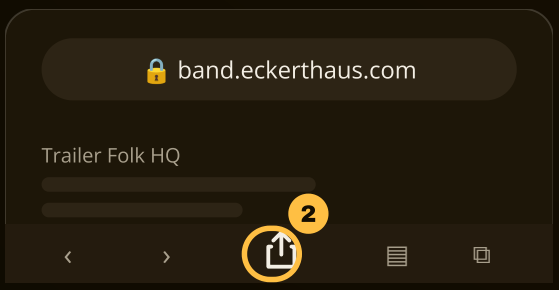

WORKS ON

iPad (the main target), iPhone, and Android phones and tablets. It's a web app, so there's nothing in an app store — you add it to your Home Screen (next two pages).

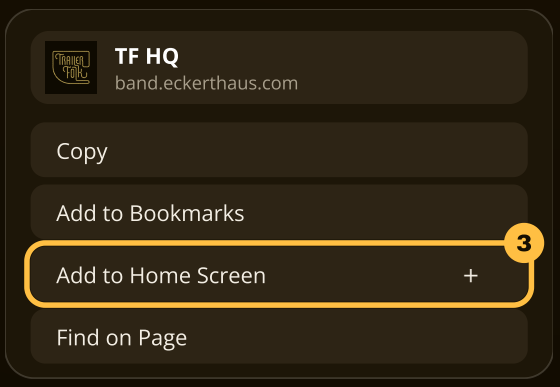

INSTALL ON IPHONE & IPAD

Two minutes, one time. Use **Safari** for this part.

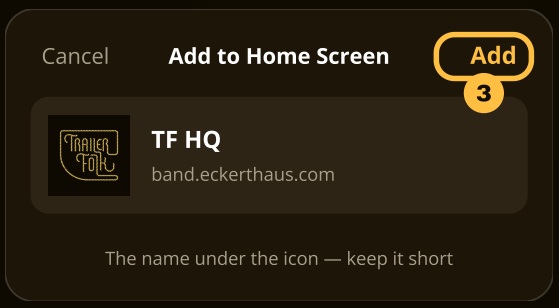

1. **Open Safari** and go to **band.eckerthaus.com**. (Not from inside Messages, Mail or Instagram — open the link in Safari itself.)
2. Tap the **Share** button — the square with an arrow. On iPhone it's in the bottom bar; on iPad it's at the top right.
3. Scroll the sheet and tap **Add to Home Screen**, then tap **Add** at the top right. Keep the name **TF HQ**.
4. **Open HQ from the new icon** on your Home Screen — not from Safari. It opens full screen like a real app.
5. **Sign in** with your email and the password Tyler gave you. Stay on the app for a minute the first time while it saves itself for offline use.

Safari: tap Share

Choose Add to Home Screen

Tap Add

Open from the icon

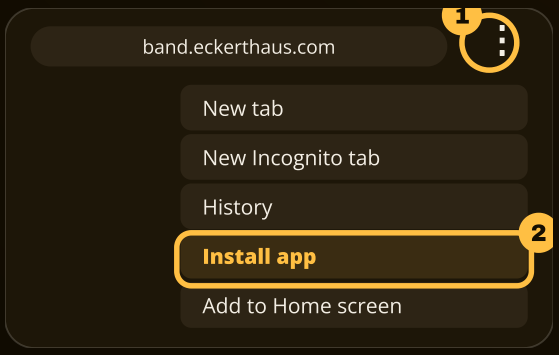

TIPS

- Always open HQ from the Home Screen icon — that's what gives you full screen, offline mode and the best gig experience.
- If something ever looks old: **Admin → Update app files now**.
- Chrome and Edge on iPhone work too on recent iOS, but Safari is the safest.

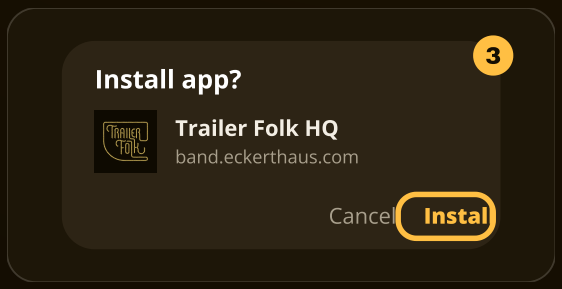

INSTALL ON ANDROID

Same app, different menu. Use **Chrome** (Samsung Internet works too).

1. Open **Chrome** and go to **band.eckerthaus.com**.
2. Tap the ⋮ **menu** at the top right, then tap **Install app**. (If you only see **Add to Home screen**, tap that instead.)
3. Tap **Install** in the box that appears. Android may ask for a second confirmation.
4. Open **Trailer Folk HQ** from your Home screen or app drawer, and **sign in** with the email and password Tyler gave you.

Chrome: ⋮ menu → Install app

Confirm with Install

Open from the new icon

SAMSUNG INTERNET

Tap the ≡ menu → **Add page to** → **Home screen**, then open it from the icon.

WHAT TO KNOW ON ANDROID

- **Everything in this guide applies** — gigs, setlists, charts, Gig mode, offline, search, Trash and Undo.
- **Calendar sync:** the Google Calendar app can't add a calendar by link. Use **calendar.google.com** in a browser (desktop site) → **Other calendars** → **From URL** and paste the link from Home.
- **Pen marks:** an S Pen or other active stylus works like an Apple Pencil — fingers scroll, the stylus draws.
- **Screen on in Gig mode:** Chrome keeps it awake. If it still sleeps, set Screen timeout to the longest.
- HQ was built iPad-first. **If something looks off,** tell Tyler your phone model, the browser and send a screenshot.

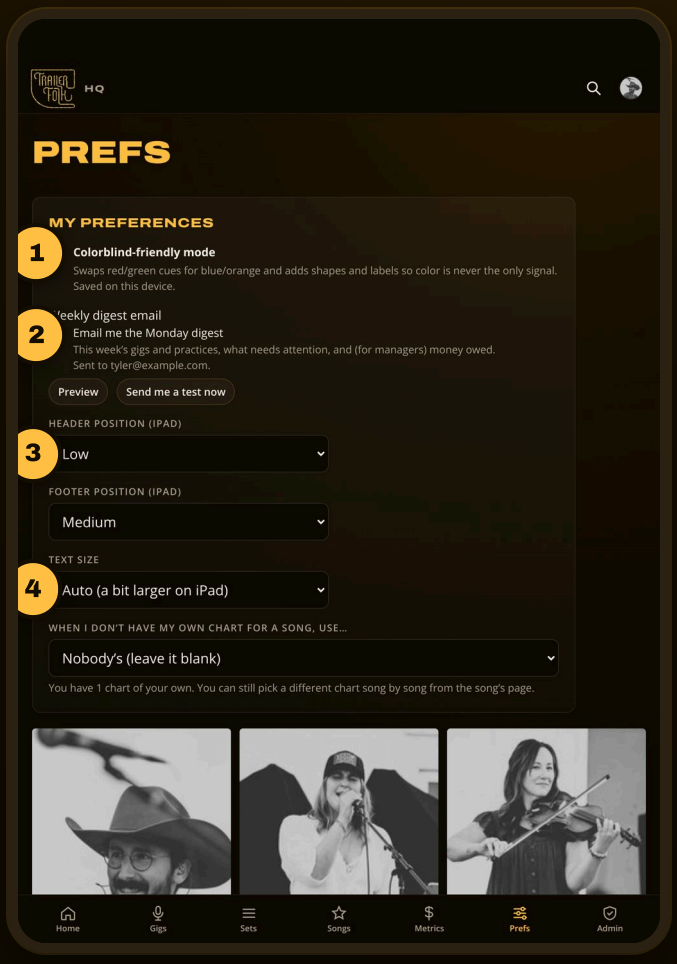

MAKE IT YOURS

A few minutes in **Prefs** pays off every gig.

1. **Colorblind-friendly mode** swaps red/green for blue/orange and adds shapes. It's saved on that device.
2. **Weekly digest email** — a Monday summary of the week ahead. Preview it or send yourself a test.
3. **Header / footer position (iPad)** — nudge the top and bottom bars if your iPad's corners crowd them.
4. **Text size** — Auto makes text a bit bigger on iPad. Pick Large or Extra large if you like.

Also in Prefs: **When I don't have my own chart…** lets you borrow a bandmate's PDFs by default, and at the bottom is the **Page-turner pedal** setup (see the Gig mode pages).

> **YOUR PHOTO, TOP RIGHT**
> Tap it for **Training docs** — this guide and the quick-start card, readable right inside HQ, even offline once opened — and **Sign out**.

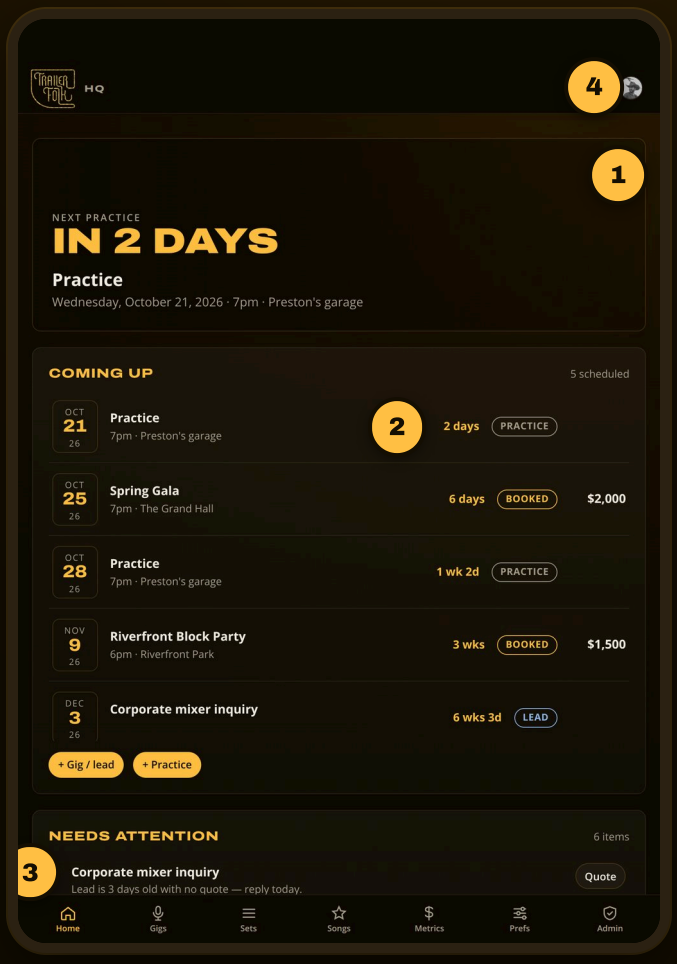

Prefs

HOME

Open the app and you're on Home: what's next, what's coming, and what needs you.

1. **Next up** — the next gig or practice, with a countdown.
2. **Coming up** — scroll through everything scheduled. The gold label on the right is **how long until it happens** ("1 wk 2d") — handy for the weekly practice rhythm. Tap any row to open it.
3. **Needs attention** — a to-do list the app builds for you: leads to answer, paperwork not signed, missing load-in times, money owed. Red = now, gold = soon, grey = FYI. Tap one to jump straight to the fix.
4. **Search** (magnifier, or press /) finds gigs, songs, clients and setlists.

Home on an iPad

CALENDAR & PHONE SYNC

Scroll to the bottom of Home for the calendar (Month or 3 months) and your personal sync link. Subscribe once and every gig and practice appears on your phone's calendar:

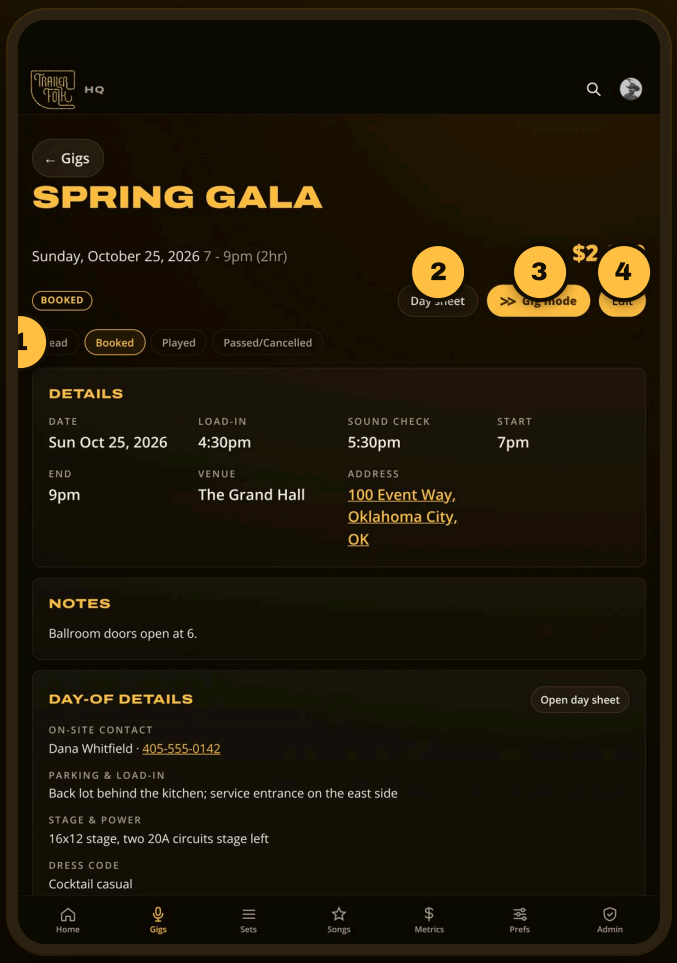

- **iPhone/iPad:** Settings → Calendar → Accounts → Add Account → Other → **Add Subscribed Calendar**, paste the link.
- **Android:** use calendar.google.com on a browser (see the Android page).

Gigs start at load-in and end an hour after the show. Gig calendars have no alerts, so your phone won't nag you.

GIGS

The Gigs tab opens on **Upcoming**. Filter by Leads, Booked, Played or Passed, or use search.

1. **Status** — Lead → Booked → Played (or Passed/Cancelled). Tap to change it.
2. **Day sheet** — a one-page summary for the day (next page).
3. **>> Gig mode** — opens the setlist ready to play (see Gig mode).
4. **Edit** — gigs open in a read-only view so you can't change something by accident. Tap Edit to change things, then **Save changes** (or Cancel).

A gig in view mode

ON A GIG PAGE

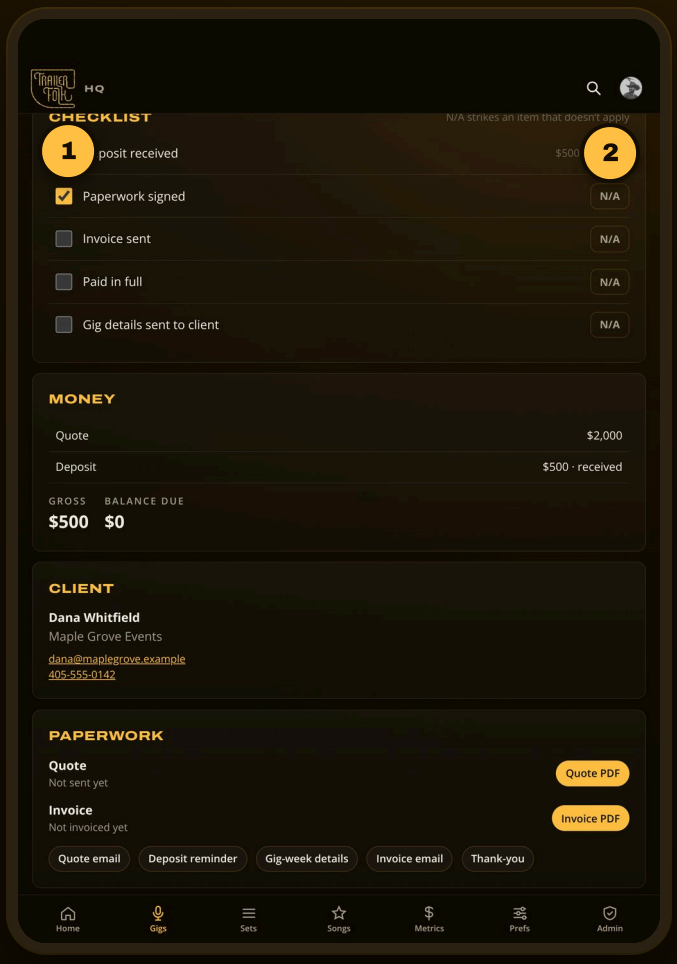

- **Details** — date, load-in, sound check, start/end, venue and a map link.
- **Day-of details** — on-site contact, parking, stage and power, dress code, food and who brings what gear.
- **Photos** — add the load-in map or stage plot. Everyone sees it.
- **Setlist** — the songs with times, and a button to open it.
- **History** — who changed what, and when.

> **DELETE IS SAFE**
> Deleting a gig moves it to the Trash with an **Undo** button for a few seconds. You can also restore it from Admin → Trash.

PAPERWORK & MONEY

Quote, deposit, invoice, paid — tracked right on the gig.

1. **Checklist** — tick Deposit received, Paperwork signed, Invoice sent, Paid in full and Gig details sent. Ticks save the moment you tap.
2. **N/A** — doesn't apply to this client (no deposit, say)? Tap N/A. The item is struck through and stops nagging you on Needs Attention. Tap Use to bring it back.

Checklist with N/A

QUOTES & INVOICES

- On the gig, the **Paperwork** section makes a branded **Quote PDF** or **Invoice PDF** and drafts the emails: quote, deposit reminder, gig-week details, invoice and thank-you.
- Invoice numbers follow your pattern (client code + year + month, like **MGE_202610**).
- Defaults — terms, how long a quote is good for, the description — live in **Admin → Quotes & invoices**.

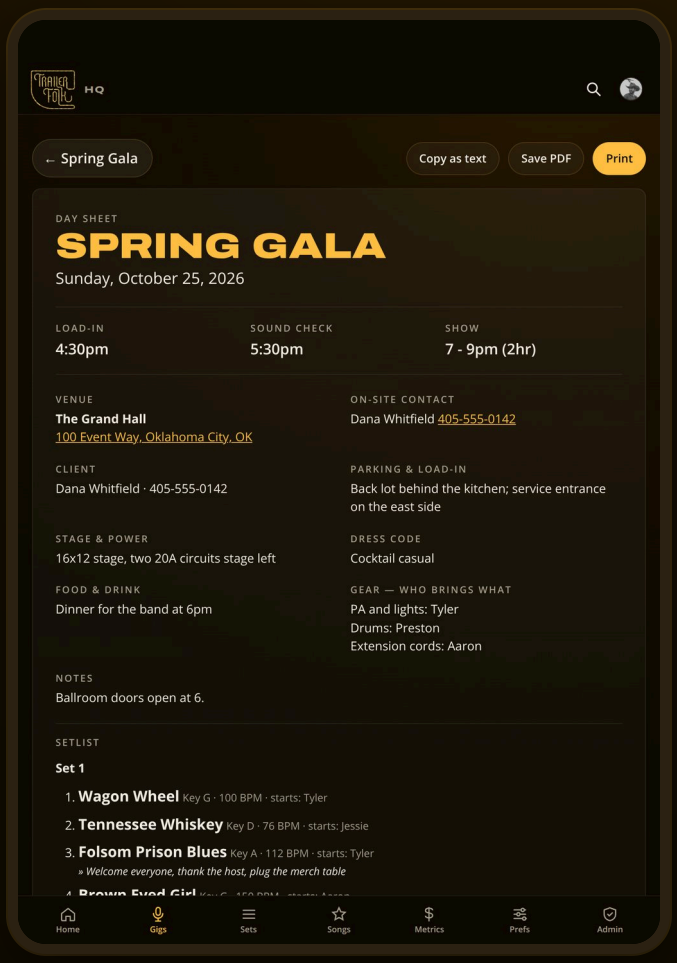

CLIENTS

- In a gig's **Client** section, pick a **Saved client** and their phone, email and address fill in automatically.
- In **Admin → Clients**, tap **+ New client** to add one, and use **Tie to a gig** to attach them to a booking.

THE DAY SHEET

One page with everything the band needs on the day. Open it from **Day sheet** on any gig.

- **Schedule** — load-in, sound check and show times.
- **Venue** with a map link, and the **on-site contact** (tap the phone number to call).
- **Parking, stage and power, dress code, food, gear** — whatever you filled in under **Day-of details**.
- **The setlist** by set, with key, BPM and who starts each song.
- **The lineup.**

The day sheet

SHARE IT

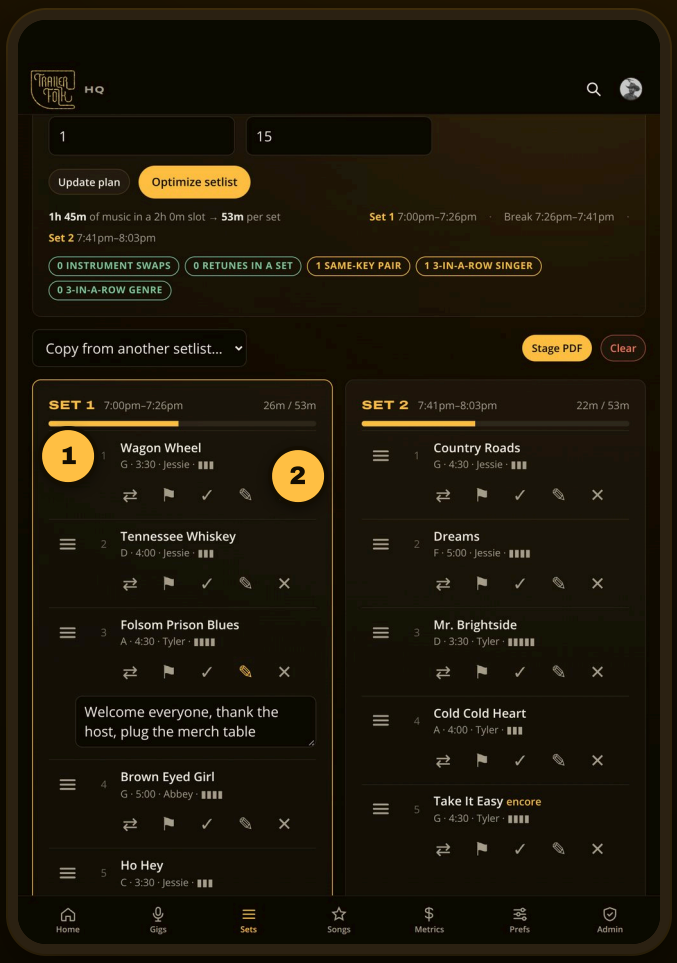

Copy as text	Paste it into the band group chat.
Save PDF	A clean PDF for email or AirDrop.
Print	A black-on-white page without the app around it.

> **FILL IT IN EARLY**
> A gig inside two weeks with no load-in time or address shows up under Needs Attention. Gigs inside a week also flag a missing on-site contact.

SETLISTS

Open a setlist to read it, tap **Edit** to change it. Songs show times, keys and a warning when a retune or instrument swap is coming.

1. **Drag** the ☰ **handle** to reorder songs — or drop one onto another set. A gold line shows where it will land.
2. The buttons on each song: ⇄ move to the next set · ⚑ pin it so the optimizer won't move it · ✓ played or skipped · ✎ add a note · ✕ remove (with Undo).
3. The **Song Book** lists songs to add. Songs already in the set you're building are hidden. Tap a song to add it.

The setlist editor

NOTES BETWEEN SONGS

Tap ✎ to write what to say or do after a song — "thank the host", "swap to banjo". It appears in Gig mode right when you need it.

OPTIMIZE SETLIST

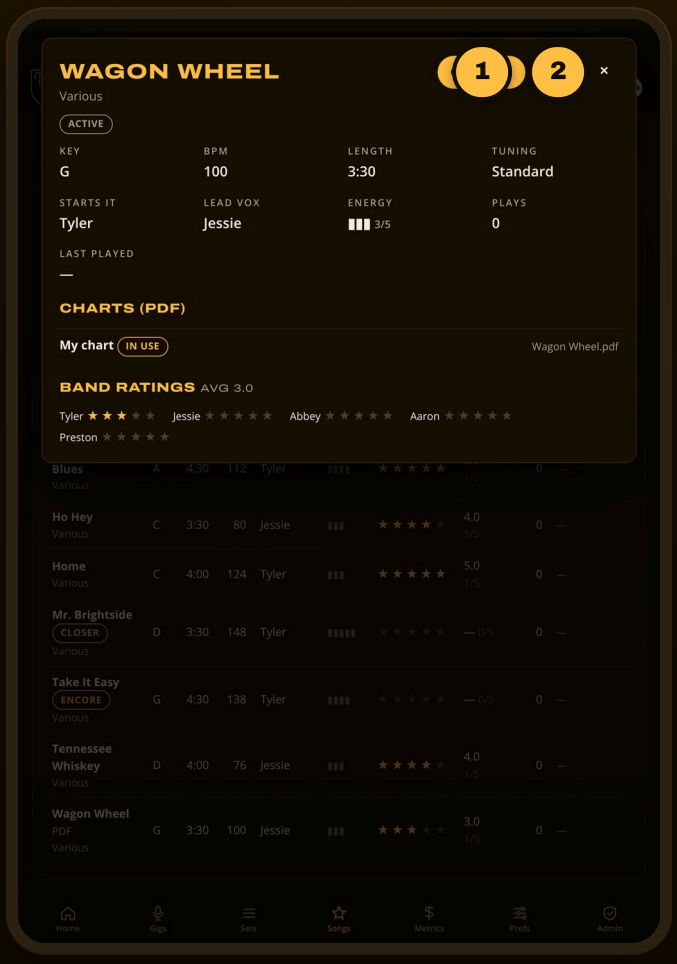

Set the **start time, slot length, number of sets, breaks and break length**, then **Optimize**. It builds sets that follow an energy arc, avoid retunes and instrument swaps (a break of 10+ minutes makes them free), open with a song marked **Good opener**, close with a **Good closer**, and add **Good encore** songs at the end. Press **Try another version** until you like one, then **Use this setlist**. Nothing changes until you do.

Also: **Stage PDF** (big-print pages), **Playlist export** (a song list for Spotify converters), **Copy from another setlist**.

SONGS & CHARTS

Tap a song for a quick read-only card. Tap **Edit** only when you mean to change it.

1. **Open chart** (yellow) opens the PDF you use for this song.
2. **Edit** changes key, capo, BPM, tuning, who starts it, lead vocal, energy, who plays what, and the Good opener / closer / encore flags.

A song card

YOUR CHARTS, YOUR FILES

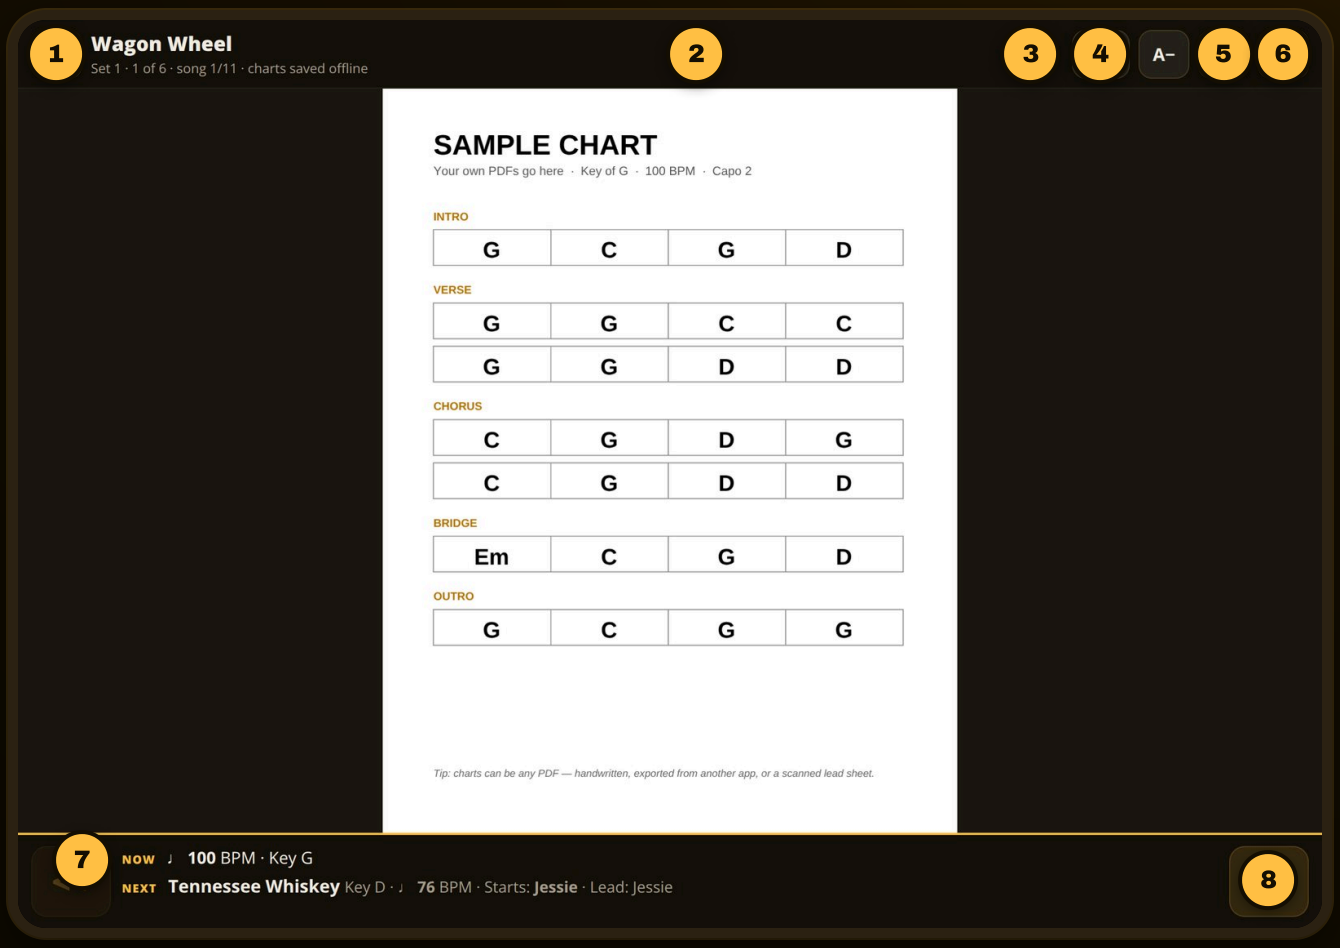

- **Everyone keeps their own PDFs.** Yours are private to you until a bandmate chooses to use them.
- **Import charts** (Songs page) takes many PDFs at once and matches them to songs by file name — fix any wrong guess before you upload.
- On a song's Edit page you can **Upload**, **Replace** or **Remove** your chart, or tap **Use theirs** to borrow a bandmate's for that song.
- In **Prefs**, choose a bandmate to fall back on for every song you don't have a chart for.

FIND SONGS FAST

Filter the song list to **No chart for me**, **Good openers / closers / encores**, or a rating (band average or your own). Tap a column heading to sort. Your stars are yours alone; the band average updates as everyone rates.

GIG MODE

Tap **>> Gig mode** on a gig or a setlist and your charts take over the screen. Open it once on Wi-Fi first — it saves every chart for the night.

Gig mode on an iPad in landscape

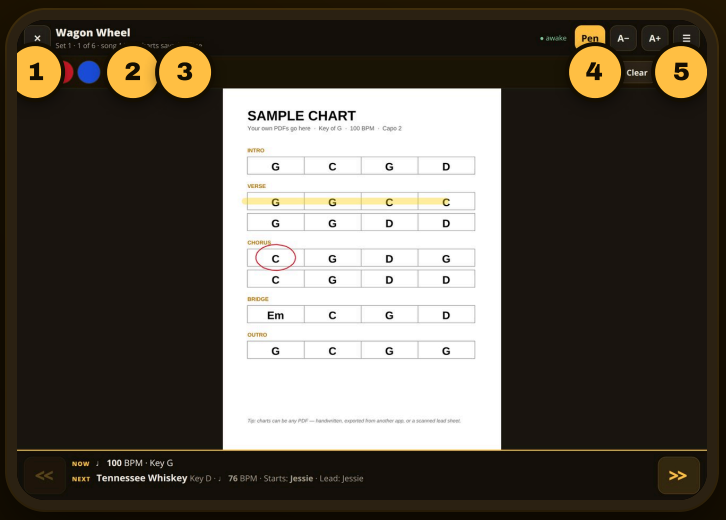

1. **Exit** — your place is remembered if you reopen.
2. **Song**, set and position.
3. **● awake** = the screen won't sleep. "may sleep" = this device won't allow it, so set Auto-Lock to Never.
4. **Pen** — mark up the chart (next page).
5. **A− / A+** — zoom. Normal size shows a whole page per screen.
6. **☰** — the whole setlist; tap to jump, and see the notes between songs.
7. **NOW / NEXT** — tempo and key now, then the next song: key, who starts it, who sings, any retune or swap, and a gold line for what to say first.
8. **<< >>** — previous / next song (a pedal does this too).

You see *your* PDF for each song. No chart yet? You still get a big card with the title, key, who starts it and the notes.

PEN & PAGE-TURNER PEDAL

MARK UP CHARTS WITH THE PENCIL

1. In Gig mode (or when you **Open chart** from a song), tap **Pen**.
2. Choose a **pen color**, **Highlight** or **Erase**. **Undo** takes back the last mark; **Clear** wipes the song.
3. Draw with the Apple Pencil — **your fingers still scroll**, and a resting palm won't leave marks. Tap **Done** when finished.

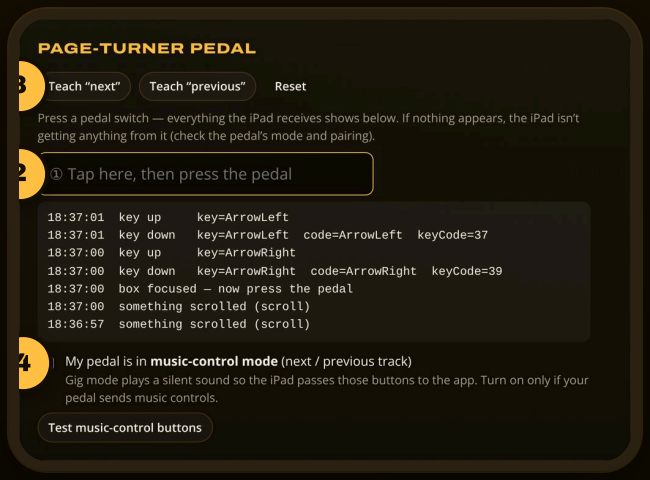

Pen mode

Marks save by themselves, stay on your iPad when you're offline, and show up on your other devices. They're **private to you**.

BLUETOOTH PAGE-TURNER PEDAL

1. Pair the pedal in your device's Bluetooth settings and put it in **arrow-key mode** (its manual shows how).
2. Go to **Prefs → Page-turner pedal** (bottom of the page). Tap the box, then press each pedal switch — a line shows what it sent.
3. A switch doesn't turn pages? Tap **Teach "next"** and press it, then **Teach "previous"**. **Reset** undoes it.
4. Pedal sends "music controls" instead of keys? Turn on **music-control mode** and use **Test**.

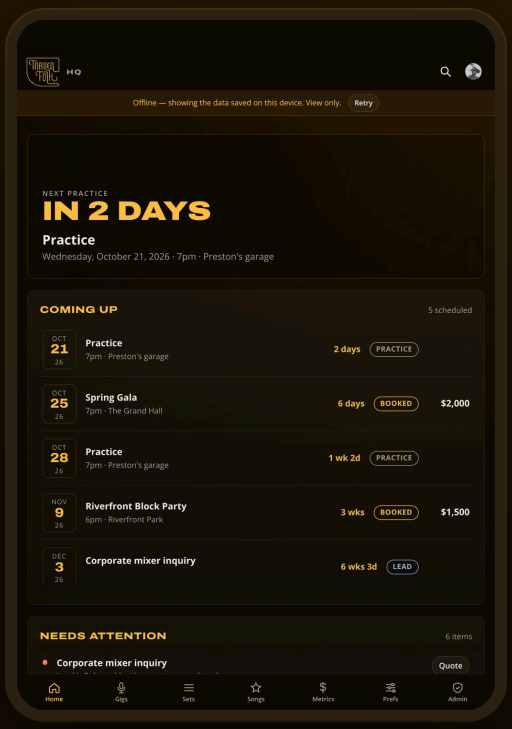

Prefs → Page-turner pedal

In Gig mode one press moves one page; on the last page the next press moves to the next song.

NO SIGNAL? NO PROBLEM

Venues have bad Wi-Fi. HQ keeps what you need on the device and tells you when it's offline.

- **Already open?** Keep using it. Everything loaded stays on screen.
- **Reopened with no signal?** HQ opens from its saved copy, with an **"Offline — view only"** bar. Tap **Retry** when you're back.
- **Charts and photos** for gigs in the next two weeks are saved automatically. Opening Gig mode on Wi-Fi saves the rest.
- **Pen marks** still save on the device and sync later.
- Offline you **can't edit** — buttons that change things are hidden so nothing is lost.

The offline bar

BEFORE THE GIG

1. Open HQ on Wi-Fi.
2. Open the setlist → **>> Gig mode** and wait for "charts saved offline".
3. Charge the device and set Auto-Lock to Never.

EVERYDAY HELPERS

SEARCH

Magnifier or `/` (also `Ctrl/⌘ K`). Type a few words — a song, a venue, a client, a date. Enter opens the top result.

UNDO & TRASH

Deleting shows an **Undo** button. Anything deleted waits in **Admin → Trash** to restore, until someone chooses "Delete forever."

PULL TO REFRESH

Pull down at the top of any page to fetch the latest. HQ also refreshes itself every minute or two when you're just looking.

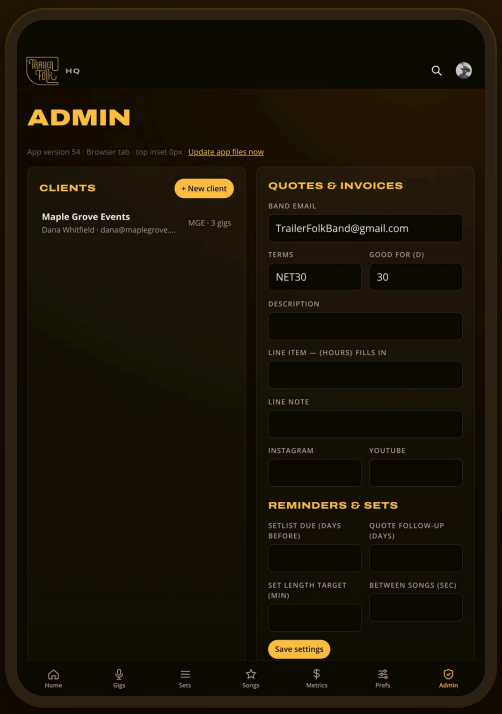

MONDAY DIGEST

An email each Monday with the week ahead and what needs attention. Turn it off any time in **Prefs**.

ADMIN & METRICS

ADMIN

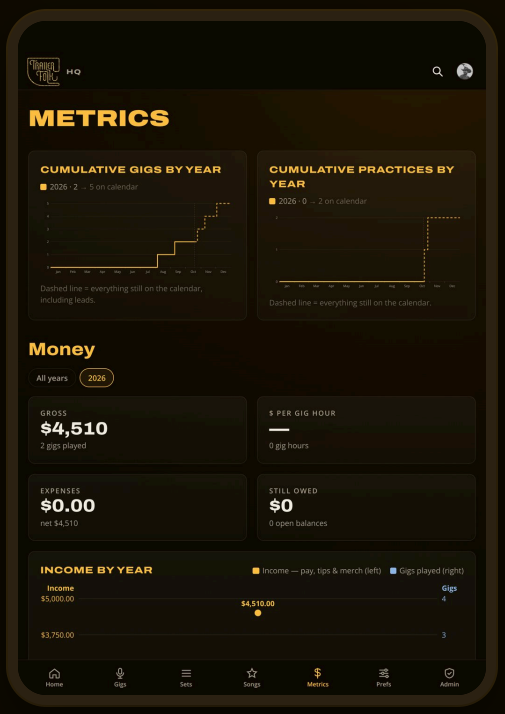

- **Top line** — the app version and an **Update app files now** link.
- **Clients** — add and edit them; tie them to gigs.
- **Quotes & invoices** — band email, terms, “Good for (d)”, default description and line item (**{hours}** fills in), reminders and set-length defaults.
- **Pay-to on invoices** — who checks are made out to.
- **Roster & logins** — managers only: names, emails, roles. A new person also needs a login created in Supabase with the same email.
- **Trash** and **Activity** — restore deleted items; see who changed what.

Admin

METRICS

Cumulative **gigs** and **practices** by year, January to December. This year’s dashed line shows everything still on the calendar, leads included. Below are income by year (money on the left, gigs on the right), what’s owed, and expenses.

Metrics

NEW PERSON JOINING?

1. Tyler adds them under **Admin → Roster & logins**, with their email.
2. A login is created for the same email in Supabase.
3. They install the app (pages 3–4) and sign in.

TROUBLESHOOTING

The app looks old or something's missing
Admin → **Update app files now**, then fully close and reopen it. Still old? Delete the Home Screen icon and add it again from Safari (Chrome on Android).

Charts won't open with no signal
Charts are saved the first time they're opened or when Gig mode loads. Open the setlist on Wi-Fi first.

Can't sign in
Check the email is on the roster (Admin → Roster & logins — managers) and that a login exists for it. Ask Tyler to reset the password.

The page-turner does nothing
Prefs → Page-turner pedal: tap the box and press the pedal. Nothing appears? It's in the wrong mode or not paired. Appears but doesn't turn pages? Use Teach "next" / "previous".

The top of the iPad looks hazy
That's iPadOS's glass effect on Home Screen apps. Check the Admin top line says "Home Screen app · top inset 0px". If not, delete the icon and add it again.

Header or footer too high or low
Prefs → Header position / Footer position (iPad).

I deleted something by mistake
Tap **Undo** right away, or Admin → **Trash** → Restore.

Text is too small
Prefs → **Text size**.

Colors are hard to tell apart
Prefs → **Colorblind-friendly mode**.

STILL STUCK?
Email **TrailerFolkBand@gmail.com** or text Tyler. Send a screenshot and tell us which device you're on (iPad, iPhone, Android and model) and whether you're in the Home Screen app or the browser. In Admin, the top line shows your app version and display mode — include it.

SEE YOU ON STAGE
